PROFILE

Odoo developer and technical consultant with commercial software experience since 2022. Deliver customisations, integrations and data migrations, working directly with clients from planning through training, go-live and ongoing support. Build AI development environments and automated workflows to support development and review.

WORK HISTORY

Software Engineer (Odoo & Full Stack) | Solvti Sp. z o.o. 2024 – Present

- Identified and fixed an Odoo/Stripe billing issue that left active subscriptions without collected payments. Triggered payment requests across hundreds of subscriptions to recover missed revenue.
- Led a UK client's migration from WordPress to Odoo, covering planning, development, training and go-live, and continue to provide support after launch.
- Develop Odoo customisations using Python, XML, JavaScript and OWL to support client business processes.
- Build integrations between Odoo and third-party systems so clients can share data across their business tools.
- Migrate client data from previous platforms into Odoo using PostgreSQL, supporting the transition to the new system.
- Built AI development tools and automated development and review workflows, with estimated savings of hundreds of hours of manual work.
- Develop and maintain business web applications using C#, .NET, JavaScript, HTML and CSS on Microsoft Azure, releasing updates through Git, GitHub and CI/CD.

Web Developer (self-employed) | Freelance 2022 – 2024

- Built full stack websites for small businesses using C#/.NET and JavaScript.
- Worked with business owners to define requirements and agree designs in Figma before development.
- Built Shopify and WordPress shops with online payments and editable content. Hosted websites on Oracle Cloud.

AI ENGINEERING AND AUTOMATION

Internal AI development at Solvti Sp. z o.o.

Built an internal environment and custom tooling that enable AI agents to work on software projects and automate repetitive development tasks.

- Created isolated working environments and tools for agent execution.
- Scoped agent access to tools within the development environment.
- Supported multiple AI providers within the environment.
- Provided an interactive user interface for people to review agent work.
- Automated repetitive development, review and preparation work, with estimated savings of hundreds of hours of manual effort.

TECHNICAL SKILLS

Odoo & data: Odoo 13-20, Python, XML, JavaScript, OWL, PostgreSQL, REST APIs, Stripe

Web development: C#, .NET, TypeScript, HTML, CSS, Shopify, WordPress

Cloud & delivery: Microsoft Azure, Oracle Cloud, Ubuntu Linux, Git, GitHub, CI/CD, Figma

AI tooling: Agent workflows, environment isolation, scoped tool access, multiple providers
